

PS Eye

Windows application for collecting CDR data from up to 64 PortStore devices over IP

PS Eye is an application for collecting and storing not only CDR data from PortStore units. Program is free for collecting data from three devices, paid version supports up to 64 data sources (IP addresses).

Goal of connecting PortStore and PS Eye application is to get CMDR/CDR data from IP or serial port (RS-232) to text files, which are processed by another application.

Data from PortStore2 or PortStore4 devices are downloaded in different ways (TCP Client / Server, FTP, Email) and are saved to files for processing in another application.

- PS Eye contains a wizard for setting the communication channel. Reads data also from email attachments, saved in specified directory.
- Data are safely stored, even if it is not possible to write to the output TXT file. File can be blocked by another application.
- Works as a service (NT service), supports Windows 2000/XP/Vista and 2000/2003 Server.

PS Eye deployment examples

- **Call accounting**
Reading the CDR / CMDR accounting data from 1 to 64 telephone private branch exchange and saving them to TXT files for telephone calls analysis.
- **Insurance events analysis**
Central data collection from printing outputs from security systems. PortStore connected as a printer to security central.

PortStore Eye, ver. 2.0.2 (Admin access)

Channel List:

	Channel Name	Status	Device	Next Due	Last Download	Data File
✘	192.168.1.43_23	Waiting...	192.168.1.43:23	08/07/20 14:00	08/07/20 12:25	192.168.1.43_23_20080720.txt
✘	192.168.1.42_23	Waiting...	192.168.1.42:23	08/07/20 14:00	08/07/20 12:24	192.168.1.42_23_20080720.txt

Data inputs to PS Eye

- **Periodical TCP Client with PortStore2**
Supports also general TCP devices.
- **TCP Server with PortStore2**
Device is initiated by data transfer.
- **Email attachments analysis** in specified directory.
- **FTP server**

System parameters

- Executive part works as a NT Service
- Windows 2000/XP/Vista and 2000/2003 Server
- Setting changes are protected by password and administrator access.
- Events and download attempts log

Protocols

- Raw TCP Client/Server
- PortStore2 RepBuf
- FTP
- PortStore4 Email

Special features

- Wizard for adding a channel with device autodetection
- PS Eye expects TXT files to be processed by a superior application (temporary file inaccessibility for data writing).

Licence

- Free version - 3 devices, non-commercial use
- Paid commercial version – 4 to 64 devices

Ordering numbers

600 353

PS Eye 15D

Commercial version, supports data import from 15 devices.
