FOR RELEASE: IMMEDIATELY

HWg-Tg11: GSM Thermometer with E-mail and Logging

“Tg11” is a GSM thermometer with alerting over SMS and e-mail. Tg11 logs the temperature in its internal Flash memory (every 15 minutes) and e-mails stored data (every 4 hours) over GPRS.

HW group s.r.o., a Czech Republic based manufacturer, introduces a new product to the market, the HWg-Tg11. This GSM thermometer with temperature logging into its internal flash is intended for temperature monitoring in remote locations. A unique feature of the product is the transmission of alert messages as well as of measured data by e-mail over GPRS.

Tg11 is intended, for instance, for small plants or warehouses. Over time, the product stores temperatures in a central system; in addition, it sends a SMS or dials a call to the responsible manager if the temperature exceeds a defined range.

HWg supplies a complete solution; the Tg11 GSM thermometer as well as the central system. The user may choose between a Windows data collection application (CapTemp software) or a web-based service (SensDesk portal).

HWg-Tg11 is designed for applications in food industry, pharmaceutical industry, surveillance, or transport of temperature-sensitive goods.

About HW group

HW group s.r.o. is a dynamic company based in the Czech Republic. Since 2000, HW group develops and distributes network technology products. The product portfolio is targeted to measuring and data collection. Approximately 60% of the production is destined to the EU market, 30% is exported outside of the EU.
