

SensDesk Mobile - online sensors in your pocket

HW group s.r.o. is a manufacturer of LAN and GSM sensors, now featuring a mobile application "SensDesk Mobile" for Apple, Android and now also for Windows smartphones and tablets.

With one tap you can see an overview of all your sensors on one screen. The mobile application is simple and easy of use. Application "SensDesk Mobile" shows sensors and devices connected to your SensDesk.com portal account.

Online portal SensDesk.com is a free online service run by HW group, a LAN and GSM sensors manufacturer. Different sensors and devices in various locations can be connected to the user account, connected over LAN or with a SIM card and GSM network. Data viewed in SensDesk Mobile on a tablet or a mobile phone can be sorted by name or devices, but can be also filtered by pre-set groups (for example sensors installed in the first and second company building)

Beside environment sensors (temperature, humidity, door contact, smoke detection or flood detection) you can connect also energy consumption meters (electricity, gas, water, heat).

### Use

A typical user is an IT manager responsible for environment monitoring and energy consumption in several server or tech. rooms. SensDesk Mobile is available for free and the system can be used independently on NMS systems for remote monitoring (SNMP or SCADA).

For testing purposes you can use a "demo" / "demo" account.
