Modbus TCP protocol

Damocles2 1208 provides 12 digital dry contact inputs (DI). All digital inputs feature 50 pulse counters with a memory to connect water, gas, electricity or other meters. Damocles2 1208 controls 8 digital open collector outputs (DO). A built-in web server is used for configuring. The device can be monitored remotely over the Internet using the SensDesk portal or the SensDesk Mobile app. Damocles2 1208 is an Ethernet I/O device with enhanced IP security and an excellent cost per I/O pin ratio.

Damocles2 devices are designed to monitor and control digital I/O over the network using secure M2M protocols (HTTPs, IPv6, SNMPv3). With support for over 50 SNMP and SCADA applications, Damocles2 devices can be integrated in a wide range of monitoring and control systems. MQTT protocol enables integration in IoT solutions.

Basic features of Damocles2 devices:

Web-based configuration	All inputs feature 32-bit pulse counters that retain their value even if the power fails	Supports "SMS + Ring" function
When a DI state changes, the device sends an e-mail, SMS, SNMP Trap, or activates a remote relay at another Damocles2 unit	With the HWg-PDMS software, 50 pulses can be converted to cost per time period and exported to MS Excel	MQTT compatibility allows connecting to IoT Hub, MS Azure, AWS IoT, Bluemix Internet of Things and other cloud services
To send an alarm SMS whenever a DI state changes, use the HWg-Trigger software, or a HWg-SMS-GW gateway in the same LAN	Examples for programmers on using the product are available in the HWg-SDK (Borland C++, MS Visual, VB, C#, PHP, JAVA and more)	Supports up to 8 virtual digital outputs (VDO) that can be mapped to physical digital outputs (relays) of other Damocles2 units on the network

Typical application examples

- Remote equipment monitoring
- Smart buildings
- UPS monitoring
- Security and surveillance systems
- Alarm indication
- Energy consumption metering
- Connecting external inputs to SCADA systems

Configuration interface

The screenshot shows the web configuration interface for the Damocles2 1208 device. The browser address bar shows '192.168.100.52/general.xml'. The interface is titled 'Damocles2 1208' and has a 'GENERAL' tab selected. On the left, there is a navigation menu with options: General, Digital Inputs (DI), Digital Outputs (DO), Security, SNMP, Modbus, Email, GSM, Log & Time, Portal, MQTT, Inputs, Outputs, Virtual Outputs, and System. The 'Digital Inputs (DI)' section is expanded, showing a table with columns: Name, ID, Current Value, Alarm Alert, and Counter. The table lists 12 binary inputs (Binary 1-12) and one Comm Monitor (Comm Monitor 1). The 'Digital Outputs (DO)' section is also expanded, showing a table with columns: Name, ID, Current Value, and Mode. The table lists 9 binary outputs (BinOut 1-9).
